ABOUT THE PROJECT

● ● ●

README.md

UTF-8 Markdown

Birthday Contribution Website - 2 is a vibe-coded web project made to collect birthday wishes and contributions for me. Instead of scattered messages, friends and family can send their wishes through one simple page. The problem it solves is keeping everything in one place: every entry submitted on the website is saved automatically in a sheet, so nothing gets lost and it is easy to review later. Main features: a simple birthday page built with HTML, a contribution form for wishes, automatic storage of all data in a sheet using Python, and a live version hosted online that anyone can open with a link.
