ABOUT THE PROJECT

README.md

UTF-8 Markdown

Personal LMS with AI Chatbot is my most efforted personal project: a learning management system built to keep my study material in one place. The problem it solves is scattered lectures and notes that are hard to find and follow. Main features: a Lecture Hub page where learning content is organised, a simple interface built with HTML, Python support behind the project, and an AI chatbot integrated into the system so questions can be asked while learning. It is hosted online as a live version that anyone can open with a link.
